JUNE IS APS AWARENESS MONTH: GET IN THE FLOW!

The Antiphospholipid Antibody Syndrome (APS) Foundation of America, Inc. (APSFA) urges the public, as well as the medical community, to learn more about this rare disease. APS Awareness Month runs throughout June.

APS is an autoimmune disorder. Such illnesses occur when the body's tissues are attacked by its own substances. In APS, the body recognizes certain components of blood or cell membranes as foreign substances and produces antibodies--a specialized protein the body uses to prevent infection--against them. It is the major cause of strokes in persons under 40 years old, blood clots (thrombosis) – which can lead to heart attack or stroke – vision disturbances and repeated, otherwise unexplainable miscarriages.

APS often is found in conjunction with lupus, another autoimmune disorder that primarily targets women.

Knowing more about APS can make all the difference. Get in the know and Get in the Flow!

Founded in 2005, the APSFA is the leading United States health agency dedicated specifically to bringing national awareness to APS. We are a volunteer-run, community-based, non-profit organization.
